Part I: Introduction and background	1
<hr/>	
1. Introduction	3
1.1 Background	3
1.2 Special aspects of this book	3
1.3 Indications of international concern	5
1.4 Why occupational segregation of men and women is an important topic	6
1.5 Should occupational segregation by sex be completely eliminated?	8
1.6 Occupational segregation is not always bad for women and good for men	8
1.7 Difference between sex and gender	9
1.8 Usefulness of cross-national analysis	10
1.9 Description of contents of this book	11
2. Theories and explanations for occupational segregation by sex	14
2.1 Neoclassical, human capital model	15
2.2 Institutional and labour market segmentation theories	20
2.3 Feminist (gender) theories and other explanations	22
2.4 Female-male pay differentials and occupational segregation by sex	30
3. Review of cross-national studies of occupational segregation by sex	38

Part II: Description of study data and occupational segregation statistics	51
4. Comparability of data between countries and within countries over time	53
4.1 Country coverage	55
4.2 Data sources	56
4.3 Worker coverage	57
4.4 Definition and measurement of employment	58
4.5 Rules and procedures for coding occupations	59
4.6 National classifications of occupations	60
4.7 Comparability over time of national occupational classifications and of adjusted data	61
4.8 Consistency and possible errors in national data	62
5. Measuring occupational segregation	68
5.1 Inequality indices for measuring occupational segregation by sex	69
5.2 Dividing the labour force into gender-dominated and gender-integrated occupations	80
Appendix 5.1 Intuitive meaning of the index of dissimilarity (ID)	89
6. Sensitivity of segregation statistics to degree of disaggregation in occupational classification	95
6.1 Study evidence on sensitivity of inequality statistics to degree of disaggregation in occupational classification	99
6.2 Estimating adjusted national ID values with increased comparability by taking into account number of occupations in national classification	115
6.3 Study evidence on the relationship between percentage of workers in female-dominated and male-dominated occupations to degree of detail in occupational classification	117
Appendix 6.1 International standard classification of occupations (ISCO-68)	130
7. Description of study regions	138
7.1 OECD countries	139
7.2 Transition Economies	142
7.3 Middle East and North Africa	145
7.4 Asia/Pacific	147
7.5 Other Developing Countries and Areas	149

Part III: Occupational segregation around the world—The present situation	153
<hr/>	
8. Occupational segregation by sex based on data for six non-agricultural occupations	155
8.1 Occupational structure based on six major non-agricultural occupations	156
8.2 Occupational segregation by sex for six major non-agricultural occupations	157
9. Occupational segregation by sex based on detailed occupational data: Inequality indices	174
9.1 Index of dissimilarity (ID) and occupational segregation by sex in the world today	174
9.2 Socio-economic, labour market and regional determinants of occupational segregation (as measured by ID75)	187
9.3 Occupational segregation by sex in the world if one assumed that one-half of the labour force is female and that supposedly non-working women are in fact working in a new occupation entitled "unpaid housepersons and care-givers"	195
Appendix 9.1 Estimation of adjusted ID (i.e. ID75)	202
10. Occupational segregation by sex based on detailed occupational data: Extent to which occupations are male-dominated or female-dominated	206
10.1 Extensiveness of gender-dominated occupations based on unadjusted study data	207
10.2 Adjusting national data to increase cross-national comparability	213
10.3 Male workers and male-dominated occupations	215
10.4 Female workers and female-dominated occupations	222
10.5 Total non-agricultural labour force and gender-dominated occupations	227
Appendix 10.1 Estimation of adjusting national values to 75 non-agricultural occupations for percentage of female non-agricultural labour force in female-dominated occupations (FDM75), male non-agricultural labour force in male-dominated occupations (MDM75) and total non-agricultural labour force in gender-dominated occupations (TDM75) by taking into account the level of disaggregation in national occupational classifications	235

Appendix 10.2	Extent to which occupations are gender-concentrated, gender-integrated and gender-underrepresented using a <i>relative</i> concept of gender dominance	244
Appendix 10.3	Percentage of male, female and total non-agricultural labour forces with occupations having between 77.50 and 82.49 per cent of workers either males or females	247
11.	Occupations typically held by men and women	250
11.1	Seventeen typical "male" and "female" occupations	252
11.2	Five largest female-dominated occupations	276
11.3	Five largest occupations for women	285
12.	Patterns in occupational segregation by sex based on combinations of different inequality statistics	297
12.1	Correlations between inequality statistics	298
12.2	Factor analysis and patterns of inequality statistics	299
12.3	Regional patterns in inequality statistics	301
12.4	OECD subregional patterns in inequality statistics	304
Appendix 12.1	Extent to which gender-dominated occupations are comprised of male-dominated or female-dominated occupations	307
Part IV: Occupational segregation by sex around the world—changes in the past two decades		315
<hr/>		
13.	Recent changes in occupational segregation by sex based on inequality indices	319
13.1	Recent changes in occupational segregation by sex as measured by adjusted index of dissimilarity (ID)	319
13.2	Extent to which changes in ID are due to changes in the feminization of occupations or changes in the occupational structure of employment	329
13.3	Recent changes in occupational segregation by sex as measured by marginal matching index (MM)	337
13.4	Recent changes in occupational segregation by sex as measured by IDHALF	337

13.5 Regression analysis of the relationship between changes in ID and labour market variables	342
Appendix 13.1 Changes in standardized ID due to changes in the sex composition of occupations (which assume that all occupations are the same size)	350
Appendix 13.2 Changes in Marginal Matching index	353
14. Recent changes in the extent to which male and female non-agricultural labour forces are in gender-dominated occupations	355
14.1 Recent changes for male-dominated non-agricultural occupations	355
14.2 Recent changes for female-dominated non-agricultural occupations	365
15. Recent changes in the feminization of 17 important "male" and "female" occupations	373
15.1 Changes in the feminization of eight typical "male" occupations	375
15.2 Changes in the feminization of nine typical "female" occupations	391
Part V: Main findings	401
<hr/>	
16. Summary and conclusion	403
16.1 Importance of topic	403
16.2 Background on earlier studies and objectives of this book	403
16.3 Some major methodological findings	404
16.4 Some major findings for occupational segregation by sex in the world today	407
16.5 Some major findings for recent changes in occupational segregation by sex in the world	411
16.6 Concluding remarks	416
Bibliography	419
Index	431
